Dear Sir,

I strongly oppose the Texcom Injection well under consideration for approval by the TCEQ.

This well may very well pollute the very water we use in 54 counties to drink. This area they propose to inject in is used by many water wells for drinking and has been used over the past hundred years for oil exploration in which the holes may not have been plugged properly to prevent this toxic waste from finding its way into our aquifer. Our land is like swiss cheese with all these old exploration holes and they will be pumping this under extreme pressure which will certainly force this pollution into our water supply. It will also drive our property values into the gutter.

Please oppose this well.

Thanks,
